

BMW 335i E90, E91, E92 (2009)

EVOLUTION EXHAUST SYSTEM

The BMW 335i with the twin-turbo engine is a real factory-made beast. However, our engineers developed a complete exhaust system which pushes this powerful Bavarian ahead of the pack. The next stage in revolutionizing the performance of the BMW 335i, past the Slip-on option is the great Evolution exhaust system – a must have for all drivers of this civilian rocket from Munich. This system, which is made entirely of titanium and consists of a header, a middle crossover and muffler tubes as well as a new muffler and tailpipes, gives the BMW 335i more power and weighs less that offers an even better on-road performance. The BMW 335i stock exhaust system weighs more than twice as much as the Evolution, which speaks of the great achievement of our engineers.

Performance

Measurements of the Akrapovic Evolution Exhaust System on the BMW 335i show we made no compromises. That can be seen in additional power of 12.4 HP (at 5980 rpm) and 16.4 Nm (at 2910 rpm). But it is not all about providing more peak power. One can also observe noticeable refinements to the whole rpm range from 2500 rpm to over 6500 rpm. From 2000 rpm to 3000 rpm, the power is delivered homogeneously. When we are trying to achieve better dynamic performance, weight plays a very important role; hence, we are very proud of our work. The Akrapovic Evolution weighs only 14.37 kilograms – not even a one-third of the weight of the stock exhaust. This noticeably changes the weight of the car. Made entirely of titanium, the Evolution Exhaust System sounds very sporty and reflects the formidable nature of the powerful six-pot engine.

PERFORMANCE			
(measured on SuperFlow Dyno)	stock	AKRAPOVIC	max. increase
Max. ENGINE power kW(HP) / RPM	228.8 (311.1) / 5510	234 (318.2) / 5510	9.1 (12.4) / 5980
Max. ENGINE torq NM / RPM	427.2 / 3220	432.7 / 3440	16.4 / 2910

ADDITIONAL DATA			
weight comparison (kg)	stock	AKRAPOVIC	difference
	34.22	14.37	19.85
legal for street use	NO
